

Create 8 multiple choice questions on landforms created by coastal erosion for KS3

1. What type of coastline is typically affected by coastal erosion?

- A. Tropical
- B. Dry
- C. Subtropical
- D. Rocky

2. What is a headland?

- A. A narrow ridge of rock or sand
- B. A deep body of water
- C. A large waterfall
- D. A high rocky headland

3. What type of landform is created by coastal erosion?

- A. Cliffs
- B. Islands
- C. Sand bars
- D. All of the above

4. What is a sea arch?

- A. A deep ocean depression
- B. An area of marsh land
- C. A large waterfall
- D. A naturally formed archway through a coastline

5. How does coastal erosion affect the coastline?

- A. It widens the beaches
- B. It creates high cliffs
- C. It increases coastal flooding
- D. It reduces the rate of sea level rise

6. What is a stack?

- A. An island created by an eroding sandbar
- B. An isolated rock formed from an eroding headland
- C. A small island created by an eroding sea arch
- D. A mound of sediment created by water movement

7. What is beach erosion?

- A. The process of sand and sediment being deposited on a shoreline
- B. The process of sand and sediment being eroded on a shoreline
- C. The process of water creating a beach
- D. The process of beach maintenance

8. What is a spit?

- A. A deep water depression
- B. A deposit of sand and sediment jutting out from a coastline
- C. A deep underwater trench
- D. An isolated rock formation
